About ESGITM

The ESCMID Study Group on Infections in Travellers and Migrants promotes collaborative research to obtain multi-centre data on the epidemiology, clinical presentation and prevention of travel-related infections. The group takes a multidisciplinary approach to the management of infections in travellers and immigrants, offering advice for travellers and promoting awareness of the importance of travel- and migration-related infections in scientific community, public and among other stakeholders.

Publications

Projects

SG Research Funding 10365 (Sally Hargreaves, ESGITM): Infectious diseases screening and vaccination policy for migrants in Europe (planned to run until Feb 2018)

Evidence-based guidance on screening for infectious diseases among migrants to the EU/EEA
