

ReAct

Action on Antibiotic Resistance

ABOUT OUR NETWORK

ReAct is a global network for concerted action on antibiotic resistance (ABR). Initiated in 2005, ReAct was one of the first international actors to articulate the complex nature of ABR and its drivers. We aim for profound change in awareness and action, to manage the interacting social, political, ecological and technical forces that drive the rising rate of resistant human and animal infection, as well as the rapid spread of resistance within and between communities and countries. We currently drive three programs; GATE, EEE, and SP.

The ReAct nodes in Europe, North America, Latin America, South East Asia and Africa all catalyze action on antibiotic resistance through a variety of means, including translation of scientific evidence to policy makers, helping develop national policy platforms, and mobilizing civil society groups to take action on ABR.

GENERATION & TRANSLATION OF EVIDENCE (GATE)

The GATE program focuses on providing high quality, scientifically credible, and updated information on ABR. Science, observations and ideas from the ground are distilled and synthesized into tools such as papers, guidelines, fact sheets, online courses, and other learning materials, to meet the needs of field actors in varied contexts.

EMPOWERMENT, ENGAGEMENT & NETWORK EXTENSION (EEE)

The EEE program aims to raise awareness, educate, change behavior, empower and mobilize stakeholder-communities for action to address ABR. These are necessary steps toward social change, and prerequisites in tackling any major health issue.

STRATEGIC POLICY (SP)

The SP program aims to advance policy approaches that have potential to catalyze how challenge of antibiotic resistance are addressed, and to support initiatives that address wider systematic and structural issues. Approaches include strategic consultations, developing white papers, and contributing to policy convenings.

Launching soon:

TOOLBOX

April 28th marks the launch of the ReAct Toolbox - a web based tool for taking action on ABR. The Toolbox provides guidance on how to work with the issue based on scientific evidence, along with the experiences of experts around the globe.

WE WANT TO TALK!

Dr. Thomas Tängdén, Medical Director of ReAct Europe, is attending the ECCMID European Network Corner. If you want to get in touch later, or just wish to read more, please take a business card or scan the QR code to visit our webpage.

OUR VISION

A world free from fear of untreatable infections
